A Call for Authors

Introducing a New Series from Chapman & Hall/CRC

Modern Mechanics & Mathematics Series

AIMS AND SCOPE:

In the history of science, mathematics and mechanics have always been intertwined. Not only does the analysis of mechanical phenomena depend on the tools of mathematics, but since the time of Newton, Euler, and Lagrange, mechanicians have frequently developed revolutionary concepts and methods that precipitated important new advances in mathematics.

The **Taylor & Francis/CRC Modern Mechanics and Mathematics series** is dedicated to maintaining this tradition and promoting the interaction of mathematics and mechanics. Interpreting modern mechanics in its broadest sense to include physical, chemical, and biological phenomena, this series will feature textbooks and handbooks in many multi-disciplinary fields of mathematics and mechanics. Works promoting the interplay between theory and engineering applications are especially encouraged. The main emphasis is on the use of mathematical methods and concepts to advance the science of mechanics. However, priority will be given to new topics in mechanics that also drive the development of mathematical analysis, as reflected in the history of the development of mathematical physics.

The **Modern Mechanics and Mathematics Series** is setting a new standard for the dissemination of cross-disciplinary advances in theory, techniques, and applications. It now takes its place among the other critically acclaimed series from the Taylor & Francis/CRC including the Engineering Handbook series, the Monographs and Surveys in Pure and Applied Mathematics, and the Research Notes in Mathematics series.

Editors

David Y. Gao

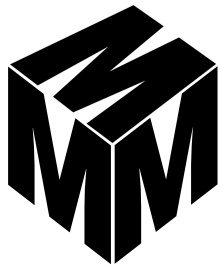
Modern Mechanics & Mathematics Series

EDITORIAL BOARD OF MMM BOOK SERIES



Jan Awrejcewicz (Technical University of Łódź, Poland)
http://www.p.lodz.pl/k16/awrejcewicz/index_awrej.html)
nonlinear mechanics, multibody dynamics, biomechanics

Athanassios S. Fokas (University of Cambridge)
http://www.damtp.cam.ac.uk/user/tf227/)
applied mathematics and fluid mechanics

Dominique Jeulin (Ecole des Mines de Paris, France)
http://cmm.ensmp.fr/~jeulin/
mathematical morphology, probability theory in mechanics, image analysis and stereology, continuum-discrete problems

Irena Lasiecka (University of Virgina, USA)
http://www.math.virginia.edu/Faculty/Lasiecka/
PDEs and related control theory

Qishao Lu (Beijing University of Aeronautics and Astronautics, China)
http://www.ss.buaa.edu.cn/syscontrol/luqishao.htm
nonlinear dynamics, biomechanics

Gérard A. Maugin (Institut d'Alembert, Université Pierre et Marie Curie, France)
http://www.lmm.jussieu.fr/MEMBRES/MAUGIN/directeur.html
continuum mechanics and thermodynamics, configurational forces and materials mechanics, nonlinear waves

Ray W. Ogden (University of Glasgow, UK)
http://www.maths.gla.ac.uk/~rwo/
solid mechanics, nonlinear elasticity, biomechanics

Meir (Fiki) Shillor (Oaklnad University, USA)
http://personalwebs.oakland.edu/~shillor/
applied analysis and solid mechanics

Andrzej Święch (Georgia Institute of Technology, USA)
http://www.math.gatech.edu/~swiech/
nonlinear PDEs, optimal control, differential games, stochastic PDEs, and mathematical fluid dynamics

Roger Temam (Indiana University, USA and Paris, France)
http://mypage.iu.edu/~temam/home_F.htm
functional, applied and numerical analysis. PDEs, continuum mechanics, fluid mechanics, turbulence and chaos

Kok Lay Teo (Curtin University of Technology, Perth, Australia),
http://www.maths.curtin.edu.au/staff/teo/index.cfm dynamical systems,
optimization and control

Stéphane Zaleski (Institut d'Alembert, Université Pierre et Marie Curie, France)
http://www.lmm.jussieu.fr/~zaleski/zaleski.html fluid mechanics
fluid mechanics
